

# 【PFAS Overview】

## ※ 1 Definition of Specific PFAS

Substances that have been confirmed to be persistence, bioaccumulation, long-range transport, and toxicity, and are regulated (eliminated or restricted) under the Stockholm Convention on Persistent Organic Pollutants (POPs Convention).

⇒ PFOS, PFOA, PFHxS and related substances

The number of substances for specific PFAS may increase in the future under the regulatory situation.

## ※ 2 Fluoropolymers and Fluoroelastomers meet the OECD criteria for polymers of low concern, which means they are chemically and biologically stable, non-bioaccumulative and non-toxic.
